CoCo Communications CEO Tucker Named to Presidential Spectrum Management Advisory Committee

WASHINGTON, DC (November 3, 2006) – CoCo Communications, operators of the nation's first interoperable homeland security network for local, state and federal agencies, today announced that its chief executive officer, Mark Tucker, was appointed by the White House to serve on the Commerce Spectrum Management Advisory Committee. The Committee, consisting of representatives from state, regional and local sectors, industry, academia and consumer groups, will advise the Commerce Department on key elements of President Bush's 21st Century Spectrum Policy Initiative for improving management of the nation's airwaves.

"I am honored to be part of such a diverse and respected group of individuals tasked with promoting spectrum policies that will enable our country to remain a leader in developing, augmenting and implementing wireless technologies," said Tucker. "It is important in the discussions on spectrum policy that we keep the needs of public safety, homeland security and other critical infrastructure agencies top of mind in order to ensure they have the resources and interoperability they need to protect our nation and our fellow citizens."

Committee members will offer expertise and perspective on reforms to enable new technologies and services, including reforms that expedite the American public's access to broadband services, public safety, digital television, and long-range spectrum planning. The committee will serve to facilitate increased understanding among all spectrum users about their respective interests, and act as a liaison between the stakeholders represented by the membership and the federal government.

"I look forward to applying my experiences and knowledge to the benefit of the mission of the Committee, and thank the Administration for its leadership on this issue," said Tucker.

About CoCo Communications Corp.

CoCo facilitates secure communication for government agencies, military, critical infrastructure users and schools. CoCo Communications Corp. was founded in 2002 after analyzing many well documented communications failures and shortcomings. CoCo invented technology that solves many of the most critical challenges simultaneously including security, interoperability, and network capacity. As a result, our nation's first responders—as well as public and private operators of critical infrastructures—can now have secure, interoperable, and scalable communications without changing the way they naturally communicate with each other. CoCo™ convergence fabric bridges existing communication networks, opening previously closed systems and leveraging installed assets. The company has numerous patents pending on its standards-based security platform. Visit www.cococorp.com for more information.
